Mathematical Physics  
Index

I

|                                                                   |       |
|-------------------------------------------------------------------|-------|
| Linear second order pde's in physics                              | 1-11  |
| Superposition                                                     | 12    |
| Boundary conditions                                               | 13-15 |
| Orthogonal curvilinear coordinates                                | 16-21 |
| Separation of variables:                                          |       |
| Time wave eq                                                      | 22-23 |
| diffusion eq                                                      | 23-24 |
| Wave eq; stretched string<br>(orthogonality of sine fnc on pg 27) | 24-28 |
| 3-d Helmholtz eq                                                  |       |
| Cartesian coords                                                  | 29-35 |
| Cylindrical coords<br>(Bessel eq pg 38; no z-dependence pg 39)    | 35-39 |
| Spherical coords<br>(Associated Legendre eq pg 43)                | 40-43 |
| Standard form/singular points/examples                            | 44-47 |
| Wronskian                                                         | 48-54 |
| (second soln pg 50; <b>Skip 51-54 2005</b> )                      |       |
| Series solution of homogeneous equation:                          |       |
| Expansion about regular point                                     | 55-56 |
| About regular singular point (Frobenius)                          | 57-62 |
| Generalized Frobenius (for second soln)                           | 63-66 |
| Summary/Example                                                   | 67-72 |

II

|                                                                     |         |
|---------------------------------------------------------------------|---------|
| Sturm Liouville eigenvalue problem:                                 |         |
| Self-adjoint/boundary conditions                                    | 73-78   |
| Matrix analogue                                                     | 79-81   |
| Orthogonality/Completeness<br>( <b>Skip 87-95 2005</b> )            | 82-86   |
| Summary/Closure relation<br>( <b>Skip ket notation 97-98 2005</b> ) | 96      |
| Eigenfn expansion/Fourier series and integral                       | 99-102  |
| Cylindrical symmetry:                                               |         |
| Frobenius soln of Bessel eq (Bessel/Neumann)<br>( $J_m$ pg 105)     | 103-107 |

|                                                                  |         |
|------------------------------------------------------------------|---------|
| Asymptotic behaviour/Hankel fns                                  | 109     |
| Bessel fn relations                                              | 110     |
| Generating fn for Bessel fns                                     | 111-113 |
| Orthogonality                                                    | 114-116 |
| Modified Bessel eq (in context of Laplace eqn)                   | 117-119 |
| Laplace equation correlation/example in finite region            | 120-125 |
| Infinite region in radial coord                                  | 125-129 |
| (orthog pg126; eigenfn expansion – Fourier Bessel pg 129)        |         |
| Example                                                          | 130-131 |
| Normal mode problems with Cylindrical Symmetry                   | 132     |
| (Laplace with time indpt nonhomo bc plus Helmholtz with homo bc) |         |
| Diffusion eq                                                     | 133-135 |
| Example                                                          | 136-137 |
| Wave eq                                                          | 138-139 |
| Example – vibrating circular drumhead                            | 140-144 |
| III                                                              |         |
| Problems with Spherical Symmetry                                 | 145     |
| Angular dependence                                               | 146-147 |
| Associated Legendre equation                                     | 147     |
| Legendre equation                                                | 148-150 |
| Legendre polynomials                                             | 150-152 |
| Orthogonality, Rodrigues formula, generating function            | 153-162 |
| Fourier-Legendre series, recursion relations                     | 162-165 |
| Solve Assoc Legendre eqn, Assoc Leg functions, orthog            | 166-174 |
| Summary of angular dependence in spherical cords                 | 175     |
| Spherical Harmonics                                              | 176-178 |
| Addition theorem for spherical harmonics                         | 179-183 |
| Multipole expansion                                              | 183-189 |
| Radial dependence Laplace's equation                             | 190     |
| General boundary conditions Laplace's equation spher cords       | 191-194 |
| Example: conducting sphere in uniform field                      | 195-199 |
| Example: flow about spherical object                             | 200-202 |
| Radial dependence Helmholtz equation                             | 202-203 |
| Spherical Bessel and Neumann functions                           | 204-209 |
| Spherical Hankel functions                                       | 210-211 |
| Orthogonality properties                                         | 212-216 |
| Expansion of plane wave in spherical cords                       | 217-221 |
| Spherical waves                                                  | 221-227 |
| Scattering of plane wave by sphere                               | 228-234 |

#### IV (done last in the course)

#### Green's Functions

# V

|                                                           |         |
|-----------------------------------------------------------|---------|
| Complex Analysis                                          | C1-C98  |
| Complex numbers                                           | C1      |
| Functions of complex variables                            | C2-C7   |
| Analytic functions                                        | C7-C14  |
| Cauchy-Riemann equations                                  | C14-C17 |
| Examples                                                  | C17-C18 |
| Multi-valued functions, branch points,cuts Riemann sheets | C19-C31 |
| Contour Integrals                                         | C31-C35 |
| Examples                                                  | C36-C39 |
| Cauchy's theorem                                          | C39-C43 |
| Cauchy's Integral formula                                 | C44-C47 |
| Derivatives of an analytic function                       | C48     |
| Analytic functions and power series                       | C49     |
